

# Savoye Hugo

I'm a Mobile  
Software Engineer

# Who am I ?

I'm a young developer with real-world experience already under my belt. 6 months of hands-on work, and the drive to grow every single day.

What am I looking for now? To design meaningful Android (or cross-platform) applications with a committed and collaborative team.\*

My goal: Not just knowing how to do it but doing it well.

## My Skills

Kotlin

Compose

Node.js

Go

Git

Firebase

# My projects

## iDCheck

Measure the performance of iDAKTO's document reading with a solution accessible to all!

Kotlin

Compose

Go

PostgreSQL

## Edgar

Simplify plant care for those without a green thumb.

JavaScript

PWA

Node.js

MongoDB

# iDCheck

**Measure the performance of iDAKTO's document reading with a solution accessible to all!**

Development of a mobile application for iDAKTO, designed to scan identity documents and send performance reports to a REST service built in Go with PostgreSQL.

The reports are displayed in dashboards, allowing performance analysis by phone model and country to continuously optimize the solution.

# Edgar

**Simplify plant care for those without a green thumb.**

Design of a cross-platform web application (PWA, JavaScript) that displays real-time data from the connected plant pot.

Integration of a REST service in Node.js with MongoDB to receive and process sensor data.

Edgar watches over your plants 24/7 and helps you keep them healthy.

 JavaScript

 PWA

 MongoDB

 Node.js
